

# Window blind

The blind protects the car's interior against sunlight, the material structure absorbs up to 70% of the sun's rays, and simultaneously allows sufficient transparency.

For universal installation

- for use in individual cars it is necessary to select only the appropriate width of the blind
- see the drawing for installation

Width: 90 cm, material: polyester; trapezoid shape.

Warning: The blind cannot restrict the driver's view from the vehicle. The blinds can be used on the rear side windows or the car's rear window while driving.

If the blind is used on the rear window, the car must have a functional right rear-view mirror.
